WORKING OF MACHINE

The wire end from coil passes through straightening rollers and fed intermittently in the gripping dies, which close firmly allowing heading punch to press the head of the nails, then grip loosened and required length of the nail is fed constantly, where it is cut by cutting tools leaving ample stock for the head of the next nail. Thus ready nail is ejected by the ejector. The operations are repeated in each revolution.

WIRE FEED

The wire feed is obtained from main crank shaft. The desired length of nail is easy to set by adjustment bolt.
